EXPERIENCES

PHP Developer, Mineralli - www.mineralli.net.br Jul/2017 - Ago/2017

This web platform allow the users to have more control of their sales, commissions and rewards. The same platform has different access rules for different user types. The industry's administrator can report their achievements, control the purchase orders and financial incomes and expenses. All access are available through the website sistema.adeusgarrafao.com.br.

For this project, I led a team with two other developers. The estimated deadline was reached and new improvements were given to the customer, like hosting his platform in our servers, developing new features and implementing new reports.

PHP Developer - Founder, Reiniciando Financial Control - www.reiniciando.com.br Mar/2015

I founded Reiniciando web application for small business and personal users can do your own control of their payments easily. I have been used the latest development patterns for this platform with CakePHP Framework, JQuery, Bootstrap, CSS3 and Git solutions. At moment this platform has been used by 5 companies: three industries, one accounting office and one cooperative. It has been constantly updated and was created a multi-language version, developed the new user interface more interactivity and rewrote all code in CakePHP version 3.

Network Administrator, Joplas Industrial Ltda - www.joplas.com.br -, Alagoas, Brazil Aug/2013

Joplas acts in the composites market since 2002 in the manufacture of Tubes and Connections Line and pipes and connections.

Responsibilities:

- Day to day work in client environments,
- Front-line client IT personnel and coworkers.
- Diagnose and repair internet service. LAN networks, wireless and email failures.
- Work within network hardware such as switches, routers, servers and cabling.
- Provide best practices and valuable guidance to clients on various technology platforms,
- Deploy archiving, backup and other related data protection products and recovery of critical data.
- Work within various MS Server platforms and related MS Product deployments.
- Develop professional solution/technical documentation.
- Potentially assist/lead in designing and implementing technical disaster recovery plans.
- Meetings on a weekly basis with managers.

Achievements:

- Infrastructure ampliation: new load balance planning, managed switchers, cat.6 cables. It was rebuilt all network infrastructure and were upgraded all servers, improving availability for executing daily tasks more efficiently;
- Communication improvement: it was implemented fiber for telephone line and internet, improving quality and agility. It was rebuilt all telephone infrastructure using voip and digital phones and was reduced the monthly costs in almost 30%;
- Mobile improvement: new mobile phones were acquired in plans and unlimited plans were contracted. The mobile contract were reviewed and the costs was reduced more than 70% per month;
- Financial software development: the financial software with PHP, using CakePHP Framework, JQuery, Bootstrap and Git solutions was implemented in all companies of the group with patterned reports. It was used local installations with Linux servers with encrypted disks and restrict access for guarantee the security information.
- Implementing remote access support for more quickly solve user calls.

The achievements were implemented in these listed companies below:

- Joplas Industrial Ltda, located at Marechal Deodoro, Alagoas, Northeast;
